General Information

Class Meeting Information

Section	Days	Time	Lecture Room	Language used in class
01	Tue/Fri	10:00 ~ 11:15	NTH214	Korean (Some materials in English.)

Instructor

Name	Youngsup Kim
Office & Office Hours	GRACE School 204, Mon, Thu 11:15~12:00 or with an appointment. Ask your questions on the discussion group available from Piazza.com
Email	idebtor@gmail.com
Piazza	Use for the public open questions and comments Notice that you have an option " Post to Instructors ".
Phones	010-4939-2819 For urgent matters and texting
IA	이정준 kjune18@naver.com 010-4772-7344

Course Description and Goals

Catalog Description – 3 credit hours (PD/P/F grading optionally)

This course is designed students to introduce the core concepts of artificial intelligence, to know how it is used in everyday life and to understand why it is a building block of today's 4th Industrial Revolution. The course begins with watching various video clips and lectures to have an overview of artificial intelligence and ends with building their choice of application in own domain by themselves. Students will acquire to have a few mathematical skills and logical reasoning skills that are essential for the sciences through Python programming basics. Students will understand how the artificial intelligence system works and experience to build such a system using many open machine-learning libraries. After finishing this course, eventually, students will understand how to apply artificial intelligence in their own domain and what to study further to achieve such a purpose.

Prerequisites

High-school level of English and mathematics including derivatives and matrix

Objectives

1. Knowing the core concepts of artificial intelligence and its applications
2. Experiencing artificial intelligence applications in everyday life
3. Learning the basics of Python programming
4. Understanding the components of artificial intelligence systems such as TensorFlow and Keras open platforms

Program Outcomes

- PO1 - an ability to think computationally through machine learning principles and algorithms
- PO2 - an ability to implement computational thinking in Python programming language

My Own Objectives

1. Study hard to share
2. Give a fish, and you feed him for a day; teach a man to fish and you feed him for a lifetime.

Texts, Materials, and Resources

Textbook(Optional)

1. 딥러닝 입문, 박해선 지음, 이지스 퍼블리싱

References

1. 케라스 창시자에게 배우는 딥러닝, Francois Chollet(프랑소와 솔레), 백해선 역, 길벗출판사
2. 프로그래밍 경험한 학생: 파이썬 프로그래밍(2판), John V. Guttag, 김영섭 역, 홍릉출판사

MOOC Lectures

- "파이썬으로 배우는 기계학습" by Prof. Youngsup Kim is available from: www.kmooc.kr
- "Machine Learning" courses by Prof. Andrew Ng is available from: www.coursera.org

Joining Piazza is required.

To join Piazza, go the www.piazza.com and follow the instruction to register. If you are not able to get in, the instructor will enroll you.

- School: Handong Global University
- Course Number: GEK10109

Course Name: 모두를 위한 인공지능의 활용, Artificial Intelligence Applications for All

Most of our communication between us will go through this SNS. Post your questions here. Then your peers, TA or I will answer them.

Read README first - <https://github.com/idebtor/JoyAI>

- **All class material is available from <https://github.com/idebtor/JoyAI>**
- Read and follow the instructions in "**GettingStarted**" to get started this course.

Installing Anaconda

Anaconda is a Python and R distribution package. It aims to provide everything you need (python wise) for data science "out of the box". It includes:

- The core python language
- 200+ python "packages" (libraries)
- Jupyter Notebook
- conda, Anaconda's own package manager, used for updating Anaconda and packages

IDE(Integrated Development Environment) Tools

- **Jupyter Lab** – This comes with Anaconda, I prefer to use this tool to others.

GitHub – the place we will go every day during this semester.

- Go to <https://github.com/idebtor/joyAI>
 - Select "Watch" and "Star" buttons at the top of the github page.
 - Read "README" first.
 - **Read "GettingStarted"** and follow the instructions to get started this course.
 - Watch "GitHub" video and Install "Git" and "GitHub Desktop"
- Create your own repository JoyAlx and fetch JoyAI in your computer.

Exams, Projects and Grading

Quizzes and Exams

There will be one midterm and one final exam. You may expect to have some quizzes every week. Also, you may have a few presentations and one final project presentation.

Class Participation, Teamwork, and Q/A's on Piazza

Proactive class interaction and teamwork are expected. You are encouraged to post your questions such as homework questions, debugging, errors, anything that other students may also be concerned as well. You may post some recommended resources you have found and share with your colleagues such as websites, tips, video lectures. Also, you are encouraged to help your peers by answering questions on Piazza.

Projects or Open Resources

Even if we have a basic textbook to use, we are going to use a lot of the most recent technical presentations and lectures from open resources available on the web. Don't be afraid of using tons of materials from the web in English or Korea.

Grading:

Grades will be assigned based on the following weights: (These weights are a rough estimation.)

Homework & Quizzes	30, 10
Midterm & Final	20, 20
Final Project & Presentation	20
-0.5 per tardiness, -1.0 per absence	
Total	100

Letter grades will be assigned using the following scale:

Grade		+
A	90.0	95.0
B	80.0	85.0
C	70.0	75.0
D	60.0	65.0
F	Below 60	

- P/F Grading is available optionally if you apply for it and get approved in time.
 - PD – Pass with distinction if over 85.
 - P – Pass if over 70.
 - F – Fail, otherwise
- **Pop-quizzes:** In the beginning of the semester, two students team up, study together, and help each other.
- If you do not agree with my grading policy, you should let me know at the first week or day of registration such that I may suggest you an alternative or you should seriously think about options of changing the class or dropping the course. **At the discretion of the instructor, grades may NOT be "curved."**

Policies

Late Work

Late work is **not** accepted. Please do not ask for extensions for homework and quizzes. If accepted, there will be a hefty penalty applied. The minimum penalty per day will be 25% and more, not more than two days for any reason.

Absences and Tardy

Attendance is checked from time to time. There will be a penalty for a missing class or late class attendance. Absence with an excuse such as doctor's appointment and job interview are

allowed without penalty. Oversleeping, hangover, birthday, cold, body ache, or mom's visit would not be considered as an excuse.

Collaboration and Cheating

All incidents of cheating is reported to the Office of Student Affairs, who will maintain records of your academic misconduct.

1. Never have a copy of someone else's program in your possession either electronically or on paper and never give your program to someone else.
2. Discussing an assignment without sharing any code is generally acceptable. Helping someone to interpret a compiler error message is an example of permissible collaboration. However, if you get a significant idea from someone or internet sources, acknowledge them in your assignment.
3. These rules apply to homework and project. No cheating whatsoever in exams and quizzes.
4. In group projects (if any), you share code freely within your team, but not between teams. Each in a team is responsible for the entire project, which means that you will be held responsible if your partner uses another team's solution to produce part of your team's solution.
5. Cheating on an exam, or cheating twice in any way, will earn you an F in the course. I reserve the right to assign an F in the course to anyone who cheats on a project, though I might not exercise it.
6. Never post a complete program on Piazza for help or question, but a line of code that causes an error. In that case, you do not forget posting the entire error message along with a line of code.
7. You must include the following line at the top of your source file with your name signed.
On my honor, I pledge that I have neither received nor provided improper assistance in the completion of this programming assignment. Signed: _____

Reservation of Rights

I reserve the right to change this syllabus and these policies without prior notice.

Tentative Course Schedule

Wk	Topic	
1	강의개요 및 인공지능 소개 파이썬 기초 – Overview GitHub & Dev. Platform	KMOOC KMOOC Offline/ZOOM
2	함수와 뉴런, 넘파이 튜토리얼 파이썬 기초 – Data types	KMOOC KMOOC
3	인공뉴런의 동작 원리, 활성화 함수 파이썬 기초 – Iteration	KMOOC KMOOC
4	퍼셉트론 파이썬 기초 – Function	KMOOC KMOOC
5	기계학습 작업흐름도, 객체지향 프로그램 파이썬 기초 - String	KMOOC KMOOC
6	객체지향 퍼셉트론, 다층 퍼셉트론 파이썬 기초 - List	KMOOC KMOOC
7	순방향 신경망, 아달라인과 경사하강법 파이썬 기초 – List comprehension	KMOOC KMOOC
8	파이썬 기초 – 넘파이 튜토리얼 (1, 2, 3) 중간고사	KMOOC 절대평가 Zoom or Offline
9	내 손으로 만져보는 인공지능 선형 회귀 적용하기, 경사하강법 적용하기	YouTube

10	내 손으로 만져보는 인공지능 - 손실함수, 인공뉴론 퍼셉트론과 Gates and XOR 문제	YouTube
11	내 손으로 만져보는 인공지능 - 인공신경망의 역전파, XOR 문제, MNIST 문제	YouTube 절대평가
12	기말고사 A Sample Project 소개	ZOOM and Online Offline
13	프로젝트 그룹 토의, 선택	ZOOM
14	프로젝트 구현, 보고서 작성	ZOOM
15	프로젝트 Video 제작, Posting, Presentation	상대평가 ZOOM
16	프로젝트 Wrap-up	

The first five items to do during the first week:

- Join www.piazza.com. - 1 주차 첫 시간 출석체크는 Piazza 등록과 Piazza Q&A 에서 자신의 Nickname(성적 공개를 위한 이름)제출로 진행합니다. 당일까지 미등록자는 0.5 점 감점입니다.
School: Handong Global University
Course: Artificial Intelligence Applications for All
Let me know your 'real' email address such that I can invite you to join in Piazza. Then simply accept my invitation when you get an email from Piazza.
- Install **Anaconda** package.
 - NOTE: Do not forget to check 'PATH' option when you install Anaconda.
 - Have Python ready to run on your computer.
- Go to <https://github.com/idebtor/joyAI>
 - Select "Watch" and "Star" buttons at the top of the github page.
 - Read "README" first.
 - Read "GettingStarted"** and follow the instructions to get started this course.
 - Watch "GitHub" video and Install "Git" and "GitHub Desktop"
Create your own repository JoyAlx and fetch JoyAI in your computer.
- Study the 1st Lecture – Getting Started..
- Read or Watch materials listed in **KMOOC Week 1**.
